Profile

Java Backend Developer with 2+ years of experience specializing in **Spring Boot** microservices and distributed systems. Expertise in architecting decoupled **Authorization Engines** and schema inference tools. Actively building high-performance Full-Stack systems using **React** and **Redis**.

Experience

Associate Engineer - R&D | Litmus7 Systems Consulting July 2024 – Present

- **Developing** a distributed authorization framework utilizing **Open Policy Agent (OPA)** to enable real-time, decoupled policy enforcement across microservices.
- **Architected** a Schema Inference Utility to automate metadata discovery and mapping across **heterogeneous data stores** (SQL & NoSQL).
- **Built** custom Maven-based developer tools to automate quality gates and reduce CI/CD pipeline friction for internal teams.
- **Managing** a team of two junior engineers; responsible for defining technical design tasks, conducting architectural reviews, and mentoring on Java concurrency and code quality.
- **Technical Interviewer** for freshers, evaluating candidates on **Java, Spring Boot, Microservices**, and core CS fundamentals to ensure high-quality R&D intake.

Project Intern | Suntec Business Solutions Jan 2024 – June 2024

- Optimized backend REST modules for the Xelerate platform using Spring Boot and Hibernate.
- Developed automated test suites using **JUnit and Mockito**, reducing bug leakage in product catalog components.

Featured Projects (High Performance)

Zenith: Real-time System Monitor | github.com/me-krishnaprasad-dev/zenith 2026

- Developed a live monitoring dashboard using **React** and **WebSockets** to visualize server-side event streams.
- Built a **Spring Boot** backend to ingest high-frequency data and broadcast updates with sub-200ms latency.
- Integrated **Redis** for temporary state storage and used **Tailwind CSS** for a UI.

Nexus: Distributed Rate Limiter | github.com/me-krishnaprasad-dev/nexus 2026

- Built a standalone library to protect APIs from traffic spikes using the **Token Bucket algorithm**.
- Implemented distributed locking via **Redis** to ensure consistent rate-limiting across multiple service instances.
- Developed a **React** admin panel to dynamically update rate-limits without restarting backend services.

Malayalam Advice Generator | github.com/me-krishnaprasad-dev/advice-gen 2025

- Developed a cross-lingual application that fetches random advice via REST API and leverages the **Gemini API** for high-fidelity English-to-Malayalam translation.

Task Tracker CLI | github.com/krishna-kpa/task-tracker 2024

- Developed a high-efficiency Java utility for local task management featuring a custom file-based storage engine.

Technical Skills

Languages/Frameworks: Java, Spring Boot, Spring Security, React.js, JavaScript, Tailwind CSS

Data & Messaging: PostgreSQL, MongoDB, Redis (Distributed Caching), Kafka (Basics)

Tools & Specialized: Open Policy Agent (OPA), OPAL, Maven Plugin Development, Docker, Git

Core CS: Algorithm Design, System Design, Concurrency, RESTful Architecture

Problem Solving & Education

LeetCode: Solved **250+** problems (Java); [leetcode.com/u/krishnaprasad-a/]

Education: B.Tech in CSE, Rajiv Gandhi Institute of Technology (2024) — **CGPA: 8.27**

Activities

- **Community:** Writing technical articles on leetcode, and blogs.krishnaprasad.dev to regarding Java, System Design, DSA etc.
